

## Our Business Concept

Queensland Laboratory is a Queensland based environmental laboratory and consulting firm specialising in flow & process engineering, occupational & industrial hygiene, asbestos & hazardous materials, workplace health and safety, sustainability and climate change, environmental consulting and specialised laboratory analysis and on site testing. Queensland Laboratory offers a wide range of integrated services within the built and natural environments, with a particular expertise in mining and commercial compliance issues with air, soil, water, and workplace exposure.

Due to the increasing constraints arising from environmental and occupational issues, environmental and workplace management is quickly becoming a key issue for many companies. Queensland Laboratory, established in 2002, recognises these issues and presents a number of specialised consultants to aid and assist in the assessment and management of all environmental, occupational and engineering issues. The overall emphasis is on a practical approach, resulting in workable solutions.

## Our Mission

**Queensland Laboratory aims to deliver outstanding technical and professional consultancy and analytical services in a highly competitive and cost effective manner. We strive to ensure that our clients are provided with innovative, practical and effective solutions to all occupational and environmental issues.**
